Notes:

- (1) The maximum permissible limit is quoted from directive 2011/65/EU, Annex II
- (2) \$ Spot-test:

Negative = Absence of CrVI coating, Positive = Presence of CrVI coating;

The tested sample should be further verified by boiling-water-extraction method if the spot test result is Negative or cannot be confirmed.

♦ Boiling-water-extraction:

Negative = Absence of CrVI coating; Positive = Presence of CrVI coating

The detected concentration in boiling-water-extraction solution is equal or greater than 0.02 mg/kg with 50 cm² sample surface area.

For corrosion protection coatings on metals: Information on storage conditions and production date of the tested sample is unavailable and thus results of Cr(VI) represent status of the sample at the time of testing

#Remark:

As per client [Electronics Industry Public Company Limited] claimed, it is possible the source of lead in the sample ["sample ID 010" "Silvery Metal w/ Chips"] could be from the glass/high melting solder material of that electronic component which is exempted by RoHS regulatory (Directive 2011/65/EU recasting 2002/95/EC). However, the numerical result of detected restricted substances in sample ID 010 cannot be related back to the concentration of the substances in the original homogeneous material.
